DISASTER FIRES USHER IN NEW DECADE

PRELUDE

The 1970 spring and summer drought was a harbinger of disaster in the West. Forests of the beautiful Pacific Northwest sweltered under extreme fire danger in July and August. Three major lightning storms originated in Northern California and moved up the Cascades with little rain to accompany them. Lightning from two storms ignited a tinder box and numerous fires were started in bone-dry fuels.

Meanwhile, Southern California was 50 to 75 percent drier than normal from April through August. The stage was set for conflagrations in September and October. Air pressure patterns favored winds from the Great Basin deserts. Descending air from higher elevations dried out wildland fuels and developed into gale force "Santa Ana" winds to blast Southern California. Reaching speeds of 72 mph, they dropped humidity to 4 percent and raised temperatures into the 90's. The stage was set for disaster and sure enough man obliged by starting numerous fires.

OUTCOME

A near record of 2,015 lightning fires in the Pacific Northwest Region burned 160,900 acres. With such distinctive names as Mitchell Creek, Slide Ridge, Safety Harbor, Entiat, Gold Ridge and Forks, these six fires alone destroyed 132,600 acres of forest land on the Wenatchee and Okanogan National Forests.

Just as the Northwest Forests were recovering from the onslaught of wildfire, weather and careless man conspired to turn loose a fearful combination of wind and fire in California. The fires spread at phenomenal rates. One of them, the Laguna Fire, consumed over 3,000 acres of volatile fuels per hour during the first 48-hour period. Before rain fell at Thanksgiving, 12 fires had consumed 210,514 acres of valuable watershed within the Forest Service protection area in California.

Nationally during the year, 14,976 fires burned 519,978 acres of Forest Service protected land. A burned acreage almost three times greater than the previous five-year average. Of these fires 7,172 were man-caused; an increase of 40 percent over the five-year average. All of which adds up to highest burned acreage since 1934 and greatest number of fires since 1961 within National Forest protection area.

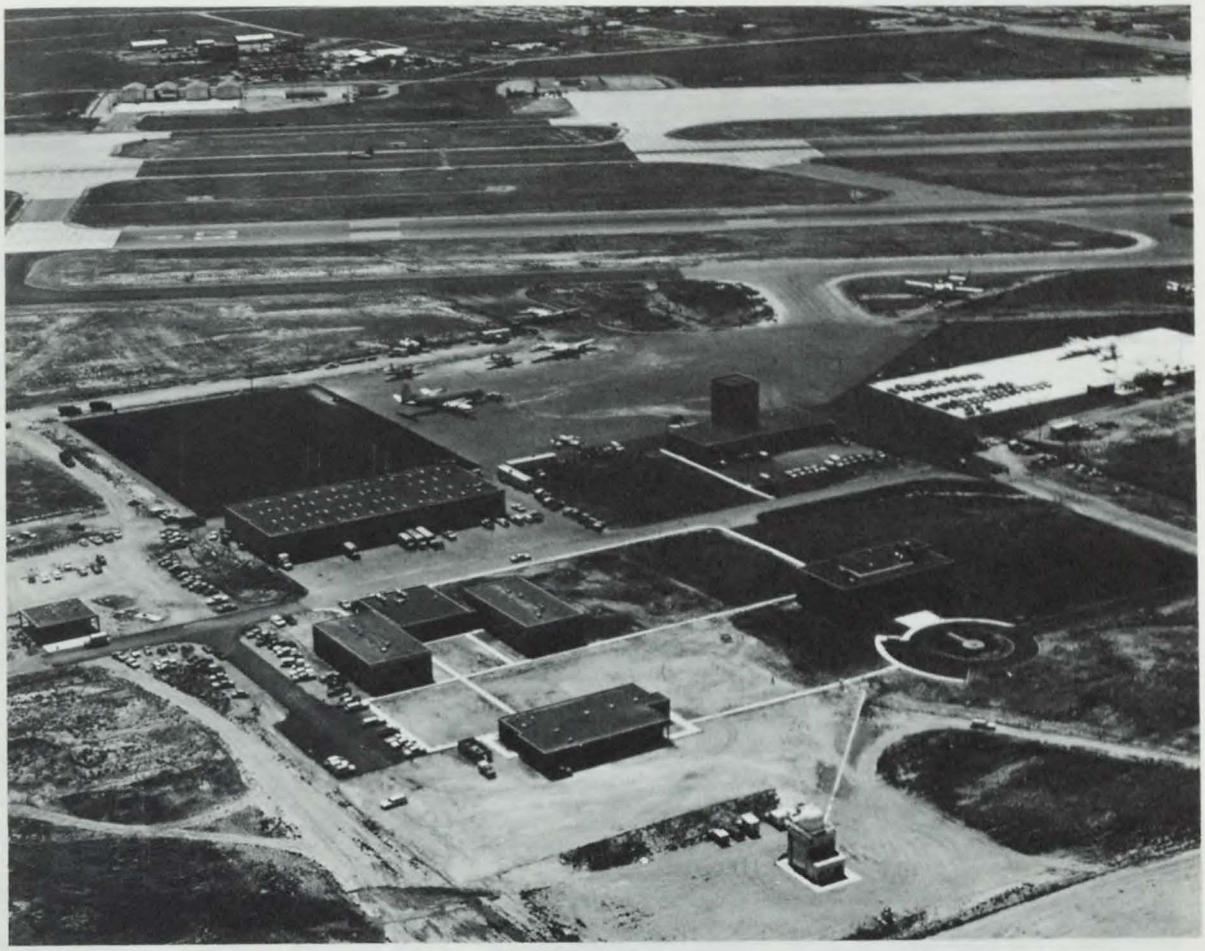
ACHIEVEMENT

Mobilization. Accomplishing the monumental task of controlling the fires required a close-knit mix of Federal, State, county and municipal fire organizations working in a closely coordinated ground and air attack. The Interagency Fire Center at Boise, Idaho, helped by coordinating deployment of more than 8,000 firefighters and overhead, to combat western fires. BIFC supplied firefighting equipment, communications systems airborne infrared mapping, and transport aircraft.



Crews. Well-trained, experienced firefighting crews in top physical shape proved to be the backbone of fire organizations during the critical 1970 season. Air transportation made it possible to move crews nationwide in time of crisis.

There was the usual interchange of crews between western forests and Regions. But for the first time crews were mobilized and transported from the Southeastern States, and Southern and Eastern Region National Forests to fight fires on the Wenatchee Forest. Meanwhile, 19 Forest Service inter-regional crews located throughout the Western States once again proved themselves to be consistently strong, effective firefighters who could be counted on to construct and hold firelines in the toughest situations.

Air Attack. Forest Service smokejumpers made 2,869 jumps to 1,078 fires. Helitack crewmen attacked 2,287 fires. Large helicopters again proved effective in delivering firefighters and equipment and by dousing fires with retardant drops from special sling buckets. All told, helicopters operated 21,370 hours on fire control activities.

Fixed wing aircraft flew a total of 63,380 hours on fire control activities. The Forest Service P2V air tanker, capable of carrying 3,000 gallons of retardant, was used extensively with excellent results. It contributed to the 12 million gallons of retardant dropped during the 1970 season by air tankers and helicopters.

Intelligence. Infrared imagery was a big help in locating fire perimeters and hot spots at night and through smoke. Forest Service IR mapping units plus Air Force IR equipped aircraft were used extensively to keep fire bosses apprised of rapidly changing conditions.

ATTAINMENT

In 1970, 93 percent of all fires were controlled at 10 acres or less in size. Less than one percent were large fires burning over 300 acres. These accounted for approximately 78 percent of the burned acreage. Forest fires burned 2.46 acres for each 1,000 acres protected.
